Current Deployment Status

Frontend Deployment:

✓ Active

Backend Deployment:

✓ Active

Database:

✓ Active

Authentication:

✓ JWT-Based Authentication

Security:

✓ bcrypt Password Hashing

✓ Role-Based Access Control

Notes

1. Frontend and Backend deployments are independent and can be updated separately.
2. Environment variables are maintained within deployment platforms and are not stored in source control.
3. Database credentials and application secrets should only be shared with authorized personnel.
4. Any future deployment changes should be coordinated with the application owner and IT team.
