

RCPL Dashboard Portal – Environment Variables & Deployment Details

1. Environment Variables

Backend Configuration (.env)

SUPABASE_URL=<https://ymjhsgswwwmcskzeienuv.supabase.co>

SUPABASE_KEY=sb_publishable_7DD14oXfA-8J11hkimQlBg_onO-Vpv-

JWT_SECRET=rcpl_dashboard_secret_key_2026_change_this_later

PORT=5000

Variable Description

Variable	Purpose
SUPABASE_URL	Supabase project URL
SUPABASE_KEY	Supabase API/Service key
JWT_SECRET	Secret key used for JWT authentication
PORT	Backend application port

2. Git Repository

Repository URL: https://github.com/TanyaChauhan15/RCPL_Portal.git

3. Deployment Information

Frontend

Technology:
React (Vite)

Build Command:

npm run build

Development Command:

npm run dev

Backend

Technology:
Node.js + Express

Development Command:

npm run dev

Required Environment Variables:

- SUPABASE_URL
- SUPABASE_KEY
- JWT_SECRET
- PORT

4. Security Configuration

Implemented Security Features:

- bcrypt password hashing
- JWT-based authentication
- Role-based access control (RBAC)
- Protected administrative APIs
- HTTPS communication

Protected Operations:

- User Management

- Dashboard Management
 - Category Management
-

5. Database Tables

users

- id
- name
- email
- username
- password
- departments
- manager
- role
- active

dashboards

- id
- dashboard_name
- department
- category
- platform
- dashboard_url
- owner_name
- active

categories

- id
 - department
 - category_name
 - active
-

6. Notes

1. Environment variables should never be committed to source control.
2. Credentials should be shared only with authorized personnel.

3. JWT_SECRET should be stored securely and rotated if required.
4. Supabase credentials should be maintained only within deployment environments.
5. Passwords are stored in hashed format using bcrypt and cannot be retrieved from the database.
