

RCPL Dashboard Portal – Project Handover Document

Project Overview

Project Name

RCPL Dashboard Portal

Objective

The RCPL Dashboard Portal provides a centralized platform for accessing business dashboards across multiple departments. The portal consolidates dashboard links from Tableau, Looker Studio, and Databricks into a single interface, improving dashboard discoverability, access management, and administration.

Departments Covered

- Sales
- HR
- Supply Chain
- Finance
- After Sales

Key Features

- User Authentication
- Department-wise Dashboard Access
- Category-wise Dashboard Organization
- Dashboard Management
- User Management
- Category Management
- Role-Based Access Control
- Admin Panel

Technology Stack

Layer	Technology
Frontend	React (Vite)
Backend	Node.js + Express
Database	Supabase PostgreSQL
Frontend Hosting	Vercel
Backend Hosting	Render
Authentication	JWT
Password Security	bcrypt

Architecture Flow

User Browser

React Frontend (Vercel)

Node.js / Express Backend (Render)

Supabase PostgreSQL

Dashboard URLs (Tableau / Looker / Databricks)

Authentication & Security

Password Security

- Passwords stored using bcrypt hashing.
- Plain-text passwords are not stored in database.

Authentication

- JWT-based authentication.
- Token generated after successful login.

Authorization

- Role-based access control.
- Admin-only operations protected through middleware.

Protected Operations:

- User Management
 - Dashboard Management
 - Category Management
-

Database Design

API Endpoints

Authentication

POST /login

Users

GET /users

POST /users

PUT /users/:id

DELETE /users/:id

Dashboards

GET /dashboards

POST /dashboards

PUT /dashboards/:id

DELETE /dashboards/:id

Categories

GET /categories

POST /categories

PUT /categories/:id

DELETE /categories/:id

Deployment Information

Frontend

Platform: Vercel

Backend

Platform: Render

Database

Platform: Supabase PostgreSQL

Environment Variables

Required Backend Variables:

SUPABASE_URL

SUPABASE_KEY

JWT_SECRET

PORT

These variables must be configured in deployment environments and should not be committed to source control.

Application Workflow

Login Flow

1. User enters email and password.
2. Frontend sends login request.
3. Backend validates user.
4. Password verified using bcrypt.
5. JWT token generated.
6. User gains access to portal.

Dashboard Access Flow

1. User logs in.
2. User selects department.
3. Access permissions validated.
4. Dashboard list loaded dynamically.
5. Dashboard opens in new browser tab.

Admin Flow

Admin can:

- Add/Edit/Delete Dashboards
- Add/Edit/Delete Users
- Add/Edit/Delete Categories

All changes are stored in Supabase and reflected dynamically without code changes.

Current Project Status

Completed:

- Dashboard Management
- User Management
- Category Management
- Department Access Control
- bcrypt Password Hashing
- JWT Authentication
- Role-Based Authorization
- Frontend Deployment
- Backend Deployment

The application is ready for deployment within the company environment.
