

RCPL Dashboard Portal – Security Summary

Security Controls Implemented

Authentication

- JWT-based authentication implemented.
- Users receive secure authentication token after login.

Password Security

- Passwords stored using bcrypt hashing.
- No plain-text password storage.

Authorization

- Role-based access control implemented.
- Administrative operations restricted to ADMIN users.

Protected APIs

Protected endpoints include:

- User Management APIs
- Dashboard Management APIs
- Category Management APIs

Secure Communication

- Frontend communicates with backend using HTTPS.
- Backend communicates with Supabase using secure connections.

Security Improvements Implemented

1. bcrypt password hashing
2. JWT authentication
3. Admin authorization middleware
4. Protected CRUD operations
5. Removal of plain-text password validation
